Mr. Jerry Zimmerman  
111 Forest Street  
Denver, Colorado

Dear Student:

It is my pleasure to inform you that your entry in the recent AEDS National Secondary School Computer Programming Contest has won honorable mention. Within the next few months you will receive free subscriptions for one year to the ACM Communications, the official publication of the Association for Computing Machines, and to the Educational Data Processing Newsletter.

This year found the largest number of entries ever in this competition. The quality of the programs was also the strongest ever submitted. You are to be congratulated for your very strong entry.

It occurs to me that you would like to know a little about the winning program. This program was an assembly simulation (ASPER) of the CDC 6600 to be run on the IBM 7094. The author of this program is Barry Safran from Stuyvesant High School in New York City.

In addition, a special award (not originally planned) went to Adrian C. Smith, Jr. from Salinas, California. His program was a game of tic-tac-toe; however, it was written on the 576 computer--which he built himself!

Sincerely,

Murray Tondow, Chairman  
Computer Programming Contest
